YOUR PARTNER IN PROFITABILITY

Welcome to our 11th Northern Spring Bull Sale in Walgett.

Since the inception of Te Mania Angus in 1928, our focus has been to provide leading livestock genetics to commercial herds which deliver profit. Today our vision remains the same, to produce the most proven and high performing bulls that will increase the profitability for you, our client, and ultimately to achieve an outstanding product for the consumer.

Many thousands of commercial cattle records of Te Mania Angus progeny have been analysed by Breedplan, which the nucleus herd uses to continually enhance the value proposition of our customers breeding herds. This is the feedback which increases the accuracy of Te Mania Angus cattle, and enables us to finetune our breeding program.

It is also why, an overwhelming number of clients report that Te Mania Angus bulls breed true to type.

This year's Walgett sale bulls provide a wonderful opportunity to accelerate your breeding programme.

The average of the entire Walgett sale team is in the top 10% of the Angus breed for IMF%, (+3.1 compared to +1.6 for the breed), the top 10% for the Heavy Grain \$Index, (\$145 compared to \$109), the top 15% for Days to Calving, Heavy Grass \$Index and the Angus Breeding \$Index, the top 20% of the breed for Scrotal Size the top 25% for 400 and 600 day weight and calving ease (dtrs).

Feature reference sires for this sale include some of the most proven and high performance sires in Australia – they are bred with a focus on structure, fertility, calving ease, growth, carcase and temperament.

Sires such as Te Mania Garth G67, Te Mania Jerome J131, Te Mania Gaskin G555 and Te Mania Deflation D367.

Structure and Temperament

The best figures in the world are meaningless without good structure and quiet, manageable cattle. This is why all Te Mania Angus cattle are independently assessed for structure by the most demanding benchmarks.

All bulls offered are out of an elite female herd that is formed by uncompromising standards. The 1,800 females are required to tick all boxes.

All females undergo the multitude of seedstock requirements and measurements (including structure and temperament assessments) in addition to passing commercial demands – calving at two-years-of age unassisted and rejoining annually whilst being managed under commercial grazing conditions.

Progeny testing is also done under commercial conditions, within the 40 member herds of Team Te Mania, spread across SA, Victoria and NSW, providing enormous amounts of data from a range of climatic and geographic conditions.

Pre – sale inspection from 9 am Monday 7th August, at the Walgett saleyards

The bull sale will be interfaced live with AuctionsPlus

You are invited to join the Gubbins and McFarlane families for an informal dinner of Angus steak at

The Barwon Inn, Walgett

Monday 7th August 2017 at 7 pm

Please reply to Te Mania Angus if you are able to join us. Amanda **03 5264 1606** or **amanda@temania.com.au**

NORTHERN SPRING BULL SALE

WALGETT SALEYARDS WALGETT NSW TUESDAY 8TH AUGUST 2017 SALE STARTS 11.30 AM

BULL SALE WILL BE INTERFACED WITH AUCTIONSPLUS, LIVE ONLINE IN REAL TIME

PHYSICAL POSSESSION AND SEMEN **INTERESTS FOR TE MANIA ANGUS BULLS**

We would like to draw your attention to the **Physical Possession and Semen** Interests clause, introduced by Te Mania Angus for all future bull sales in Autumn this year, which was omitted from our Northern Spring Bull Sale catalogue.

PHYSICAL OWNERSHIP AND SEMEN INTERESTS

Aligned with our commitment to deliver the highest quality genetics, we need to protect our ability and access to all genetics sold into the market place.

Te Mania Angus retains the right to collect semen from all bulls sold. This is strictly for Te Mania's own use, and/or for progeny testing within Team Te Mania commercial herds.

If the right to collect semen is exercised, Te Mania Angus would consult with the new owner of the bull to arrange a convenient time for collection, with cost to Te Mania Angus. In the case of syndication, which may be arranged at, or after the sale, the joint owners of the bull must be nominated to Te Mania Angus within three months from the date of sale.

Semen may only be used within the nominated owners' herds, and may not be on-sold to outside parties.

If the bull is on-sold at a later date, these conditions carry forward.

Te Mania Angus retain no interest in the physical ownership nor the salvage value of the bull.

SALE INFORMATION NORTHERN SPRING BULL SALE

118 BULLS

TUESDAY 8 AUGUST 2017 WALGETT SALEYARDS 11.30 AM

THE TE MANIA ANGUS GUARANTEE

Any Te Mania Angus bull that proves to be structurally unsound, infertile or incapable of service is guaranteed for up to three years from date of sale. Under these circumstances Te Mania Angus will:

- I) Replace the bull with a satisfactory substitute if available, or
- Issue a refund equal to the value remaining *see below, less the salvage value.

*The guarantee covers the purchase value of the bull, without interest, cost and damages. The guarantee shall apply providing the bull's incapacity is not caused by injury or disease contracted since leaving Te Mania, the value remaining is calculated on the basis that the guarantee is reduced by one third of the purchase price for each year of service from the sale date. A veterinary certificate must be supplied by the purchaser on request.

If any bull that is purchased does not possess a reasonable fertility, although not totally infertile, any dispute that may arise shall be settled by an arbitrator appointed by the auctioneers and must be lodged within 12 calendar months from date of sale.

We recommend that all purchasers discuss injury insurance of their bulls at the sale with their Agent. This guarantee is in addition to the normal terms and conditions governing auction sales.

HEALTH TREATMENTS

All the sale bulls have been ear notched and screened for BVDV (also known as Pestivirus) and have been found to have a high immunity to BVDV and it is therefore not necessary to vaccinate. We recommend that you consult your vet regarding an ongoing BVDV programme for your herd. All the sale bulls are vaccinated for Vibriosis and given a booster. We recommend annual boosters are given to all bulls.

All of our bulls receive 7 in 1 vaccinations at threemonths of age, six weeks later and a booster as a yearling. They are drenched at weaning and periodically according to worm counts. All Te Mania Angus bulls are examined by a veterinarian prior to sale day which includes palpation of the sexual anatomy and the circumference of the testicles. The jaw is checked for correct bite.

The Te Mania Angus herd is Monitored Negative Two (MN2) Status for Johnes Disease. Certificate Number is VC100.

GENETIC DISORDERS

ALL OUR SALE BULLS ARE TESTED FREE AND/OR PEDIGREE FREE OF:

Arthrogryposis Multiplex (AM), Neuropathic Hydrocephalus (NH) and Contractural Arachnodactyly (CA), formerly known as Fawn Calf Syndrome.

Some sale bulls carry the Developmental Duplications (DD) recessive gene, please refer to each lot for notification.

For more information on AM, NH, CA and DD visit our web site www.temania.com.au

CATERING

Morning tea and lunch will be provided in support of the Walgett Lambs Junior Rugby

SALE DAY PHONE NUMBERS

Tom Gubbins 0429 952 197 Hamish McFarlane 0427 641606 James McCormack 0429 992 931 Chris Clemson 0428 287 222 Russell Hiscox 0428 281 248

Bulls can be inspected at the Walgett Saleyards from Monday 7th August and from 7.30 am on the morning of the sale.

REBATES

A rebate of 3% is allowed to all agents nominating and accompanying buyers to the sale and settling within 7 days of the invoice. All agents wishing to nominate buyers must do so in writing to the vendor by 5pm on Monday 8th August. Fax to Clemson Hiscox, Walgett 02 6828 3999.

GST

Bulls will be sold GST exclusive ie. If the bull is knocked down for \$4,000, you will be charged \$4,400.

TRAVEL/ACCOMMODATION

All-weather airstrip at Walgett is available. Enquiries to Chris Clemson 0428 287 222.

Structural problems in cattle have a substantial effect on both the reproductive and growth performance of a beef herd. It is widely recognized that structural problems in sires have detrimental effects on conception rates, calving patterns and thus profitability.

Similarly, females with inadequate structural characteristics are more prone to weaning lighter calves or conceiving later in the breeding season than their more functional counterparts. These structural problems are filtered through the supply chain resulting in reduced income for the producer, feedlot and thus reducing the overall productivity of the Australian Beef Industry.

The current trend for improving consistency and quality of product has shifted producers' focus, towards selecting seedstock on carcass and growth genetic traits (EBV's). Whilst, this selection has been, and will continue to be pivotal in developing the Australian beef industry, we must not forget the fundamentals of livestock breeding.

The Beef Class Structural Assessment System was designed by the MLA, the BIA and several breed societies to address structural problems in the beef industry. Detailed analysis of three thousand animals in genetically linked herds indicated that structural characteristics such as

leg and foot structure were moderately to highly heritable. BEEFXCEL now services many seedstock operations in their selection and grading of stock using the Beef Class Structural Assessment System.

Te Mania Angus is continually expanding their structural assessment program in order to optimise soundness and performance in their stock. The program involves an independent assessor from BEEFXCEL analysing the structural composition of the herd on an individual basis.

The program used at Te Mania comprises of:

- An annual assessment of all sale bulls;
- An annual assessment of all breeding females and donor cows
- All animals deemed inadequate are culled.

AN EXPLANATION OF THE BEEF CLASS STRUCTURAL ASSESSMENT SYSTEM

The Beef Class Structural Assessment System uses a 1-9 scoring system for feet and leg structure:

- A score of 5 is ideal;
- A score of 4 or 6 shows slight variation from ideal, but this includes most sound animals. An animal scoring 4 or 6 would be acceptable in any breeding program;
- A score of 3 or 7 shows greater variation but would be acceptable in most commercial programs. However, seedstock producers should be vigilant and understand that this score indicates greater variation from ideal;

- A score of 2 or 8 are low scoring animals and should be looked at cautiously and inspected very closely before purchasing;
- A score of 1 or 9 should not be catalogued and are considered immediate culls.

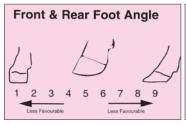

For more information please contact Jim Green 0402 003 137 or Liam Cardile 0409 572 570

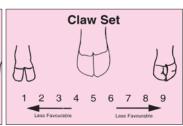

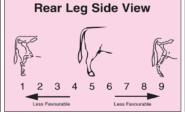

Jim Green 0402 003 137

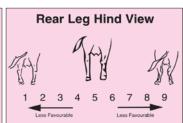

Liam Cardile 0409 572 570

Calves are weaned at four months of age. Early weaning was introduced a number of years ago to enhance rumen function and to allow females a better run through the Autumn and winter.

At Te Mania Angus all calves are weighed and tagged with an NLIS tag and stud tag on the day they are born. They are weighed again at weaning and at 400 days, when they are ultrasound scanned for marbling, fat cover and eye muscle area. Testicle measurements are taken on the bull calves. Heifers are weighed again at 600 days and all this data is submitted to Breedplan.

Cows are weighed at weaning to contribute to the Mature Cow Weight EBV. All cowherd mating details are recorded with Angus Breedplan, which calculates a gestation length EBV. Short gestation length is a crucial EBV to use along with Birth Weight when selecting young bulls to use over heifers.

All bulls receive 7 in 1 vaccinations at three-months of age, six weeks later and a booster as a yearling. They are drenched at weaning and periodically according to worm counts. They will also receive a drench before leaving the property. All Te Mania Angus bulls are examined by a veterinarian immediately prior to sale day. This examination includes palpation of the sexual anatomy and measurements of the circumference of the testicles.

STRUCTURAL ASSESSMENTS

Structural assessments are carried out by Jim Green and are provided for each bull throughout the catalogue. This ensures that any bulls not meeting our uncompromising standards for structure are culled by an independent assessor.

When a bull leaves Te Mania Angus, he is leaving the security of a large mob and will arrive at unfamiliar territory at your property. If you can't put him into the bull mob straight away, unload him and make sure he has a steer or cow as a companion. A young bull can move in with older bulls and settle in well, but remember, being the youngest he will get the last of the feed available because of the pecking order.

The paddock needs to be reasonably large so he can keep away from the others and find adequate feed. Young bulls are still growing fast and need enough feed to maintain their growth pattern and to be able to settle the cows quickly and efficiently.

Te Mania Angus bulls are accustomed to being handled by stockmen on motorbikes and with dogs. Most of the fences are electrified and the bulls treat them with respect. Always be considerate to your bull and handle him with respect and kindness. You will find you will receive these acts of respect back from him.

PESTIVIRUS (BVDV)

Pestivirus (also known as BVDV) is widespread in cattle herds worldwide. Te Mania Angus has taken three important steps to protect our dients:

- Cattle are all Ear notch tested before sale to make sure they are not PI
- A wide scale Ear notch testing/eradication program has been carried out – we believe Te Mania has no Pl animals!
- All Te Mania ulls are Vaccinated prior to sale so they are protected in the event they come in contact with the virus after leaving Te Mania.

For information on BVDV go to www.temania.com.au

This is in line with world's best practice, and provides the highest level of protection possible against the terrible losses that Pestivirus can sometimes cause.

7 IN I VACCINATION

We recommend bulls be given a 7 in I vaccination annually, 2 to 4 weeks prior to joining.

VIBRIOSIS VACCINATION

Vibriosis is a common cause of infertility and is transmitted by bulls from one female to another. It is easily prevented by vaccination. Te Mania sale bulls have been given their primer and booster shots. For future years we recommend your bull be given an annual booster 4 to 6 weeks prior to joining.

BULL: COW RATIO

Under reasonable paddock conditions, a rising 2 year old bull should handle 40 empty cows on his own. An older bull can probably handle slightly more. A synchronized Al program can decrease the number of bulls needed, because cows become pregnant to Al, but be aware that if the returns are returning over one week rather than three, then this will increase your bull requirement. Please contact Te Mania Angus for further clarification if required.

BEFORE PUTTING THE BULL OUT

Before mating, cows should be seen cycling in groups with male calves also hanging around. The cows must be on a rising plane of nutrition, before you put the bull out, this ensures they have the optimum chance of cycling.

OBSERVING THE BULL

A bull is most likely to develop a condition or injury that causes infertility AFTER THE JOINING PERIOD HAS STARTED. It is vital that you monitor your bull at least twice weekly to ensure that he is able to mount cows and that he looks physically normal and is not lame. Towards the end of the mating period, you should spend some time watching the cows to make sure that large numbers of cows are not cycling. Set aside half an hour one afternoon when the cows are at rest to make sure that most of the cycling activity has stopped, and give yourself some peace of mind! Writing down the cows number at service and observing them 21 days later is the most thorough infertility check.

AFTER MATING SEASON

When the season is finished, the bull should be drenched and put away on good feed. Adequate feed will help stop fighting and help the bulls settle into their groups.

UNDERSTANDING ANGUS BREEDPLAN EBVS

WHAT IS ANGUS BREEDPLAN?

Angus BREEDPLAN is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. Angus BREEDPLAN uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

Angus BREEDPLAN includes pedigree, performance and genomic information from the Angus Australia and New Zealand Angus Association databases to evaluate the genetics of animals across Australia and New Zealand.

Angus BREEDPLAN analyses are conducted by the Agricultural Business Research Institute (ABRI), using software developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England.

Ongoing BREEDPLAN research and development is supported by Meat and Livestock Australia.

WHAT IS AN EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

USING EBVS TO COMPARE THE GENETICS OF TWO ANIMALS

Angus BREEDPLAN EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

USING EBVS TO BENCHMARK AN ANIMAL'S GENETICS WITH THE BREED

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals in Australia and New Zealand.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to:

- the breed average EBV
- the percentile table

The current breed average EBV and percentile table is provided in these explanatory notes.

CONSIDERING ACCURACY

An accuracy value is published in association with each EBV, which is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

DESCRIPTION OF ANGUS BREEDPLAN EBVS

EBVs are calculated for a range of traits within Angus BREEDPLAN, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this sale catalogue is provided on the following pages.

ANGUS BREEDPLAN EBVS 2017

BIRTH			
Calving Ease Direct	(%)	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
Calving Ease Daughters	(%)	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
Gestation Length	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
Birth Weight	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth
GROWTH			
200 Day Growth	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
400 Day Weight	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
600 Day Weight	kg	Genetic differences between animals in live weight at 600 days of age. Higher EBVs indicate heavier live weight.	Lower EBVs indicate shorter gestation length.
Mature Cow Weight	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
FERTILITY			

ANGUS BREEDPLAN EBVS 2017

Days to Calving	kg	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
Scrotal Size	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
CARCASE			
Carcase Weight	kg	Genetic differences between animals in hot standard carcase weight at 750 days of age.	Higher EBVs indicate heavier carcase weight.
Eye Muscle Area	cm2	Genetic differences between animals in eye muscle area at the I2/I3th rib site in a 400 kg carcase.	Higher EBVs indicate larger eye muscle area.
Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more fat.
Rump Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcase.	Higher EBVs indicate more fat.
Retail Beef Yield	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcase.	Higher EBVs indicate higher yield.
Intramuscular Fat	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more intramuscular fat.
FEED EFFICIENC	CY		
Net Feed Intake (Post Weaning)	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a growing phase.	Lower EBVs indicate more feed efficiency.
Net Feed Intake (Feedlot)	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
TEMPERAMENT	Г		
Docility	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
STRUCTURE			
Front Feet Angle	%	Genetic differences between animals in desirable front feet angle (strength of pastern, depth of heel).	Higher EBVs indicate more desirable structure.
Front Feet Claw Set	%	Genetic differences between animals in desirable front feet claw set structure (shape and evenness of claw).	Higher EBVs indicate more desirable structure.
Rear Feet Angle	%	Genetic differences between animals in desirable rear feet angle (strength of pastern, depth of heel).	Higher EBVs indicate more desirable structure.
Rear Leg Hind View	%	Genetic differences between animals in desirable rear leg structure when viewed from behind.	Higher EBVs indicate more desirable structure.
Rear Leg Side View	%	Genetic differences between animals in desirable rear leg structure when viewed from the side.	Higher EBVs indicate more desirable structure.
SELECTION INC	DEXES		
Angus Breeding Index	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls.	Higher selection index values indicate greater profitability.
IIIdex		This selection index is not specific to a particular production system or market end-point, but identifies animals that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems.	pi ontability.
Domestic Index	\$	This selection index is not specific to a particular production system or market end-point, but identifies animals that will improve overall profitability in the majority of commercial grass and grain finishing beef	Higher selection index values indicate greater profitability.
	\$	This selection index is not specific to a particular production system or market end-point, but identifies animals that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems. Stylish with good frame, body length and ET conceived. The dam of this bull comes from our most prominent cow family line, Lowan. She ran through our donor program in 2008 and 2014 and has contributed 28 progeny to our herd. We have sold her sons to a high of \$14,000. She remained active with our stud herd until 11 years of age.

These Garth sons tick a lot of the boxes for calving ease, carcase attributes and docility. Stylish with good frame and body length on display here, he is also well suited for use over heifers. The dam of this bull is from our most prominent cow family line, Lowan. She remains active within the stud herd as a rising eight year old cow. Some highly regarded

females sit back in the pedigree of this bull, R312, R342, R411, U275 to name a few. Lot 54 E MANIA LEADING L594

Te Mania Garth VTMG67 is a versatile, multi-purpose sire with exceptional EBVs and the highest recorded Docility score in Australia. He is a moderate to large framed son of Te Mania Africa, with good body length, free moving with fine hair, tight sheath and excellent structure. Garth is ideal for heifer joinings with high accuracy, low birth weight and short gestation length EBVs. He has exceptional fertility and marbling. He is in top 5% of the breed for all the\$Indexes and a trait leader for gestation length, milk, scrotal size, days to calving and IMF%. Garth bends the growth curve with moderate birth weight to high 600-day growth. Garth's maternal grand-sire, Te Mania Yorkshire VTMY437, is the sire of Te Mania Berkley VTMB1. Garth's pedigree includes longevity and some of the great female lines of the Te Mania Angus herd, including Te Mania Beeac W112 and Te Mania Jedda Y32, who bred in the stud herd to 10 years of age. In our autumn 2017 bull sale we sold 38 sons for an average of \$11,105 to a sale high of \$30,000.

Te Mania Gaskin G555, son of Tuwharetoa Regent D145, is a stylish and balanced bull who possesses good body length with heaps of natural thickness. Gaskin is very handsome with a balanced set of EBVs. He is a trait leader for milk, carcase weight and IMF%. Te Mania Gaskin's pedigree is packed with performance and includes some of the great donor cows of the Te Mania herd - Te Mania Barunah R312, Te Mania Beeac R342 and Te Mania Beeac U343. As a mark of this sires standing in our autumn 2017 bull sale we sold 14 of his sons for an average of \$11,285 and to a high of \$26,000.

We purchased an interest in the sire of Flame from New Zealand as an outcross option. Flame himself is a well framed bull with heaps of capacity, butt shape and body length together with a placid temperament. Many of these attributes he has passed onto his sons. Flame is a trait leader for gestation length, 400 and 600 day weight, milk, scrotal size and carcase weight. He has been heavily progeny tested through Te Mania Angus and Team Te Mania herds.

Plenty of frame, body length and butt shape on display in this son of GAR Twinhearts. He presents with good softness and fine hair. He has been used heavily in our stud herd and also progeny tested through Team Te Mania. He is well suited for use over heifers and is a trait leader for calving ease (dir), 200D, 400D and 600D growth. He is in the top 1% of the breed for all four selection \$Indexes. In our recent 2017 Autumn bull sale we sold 15 sons for an average of \$10,067 and to a high of \$18,000.

Vermont Drambuie D57 was introduced to the program as a total outcross sire. His sons are easy doing and have good eye appeal. His EBVs indicate great growth, with slightly more moderate maturity pattern than some of the high growth outcross sires we have used. We have sold sons to a high of \$17,000. He is trait leader for scrotal size

In our March 2015 bull sale, our first offering of GAR Twinhearts 8418 sons sold to \$21,000. This very exciting, handsome outcross sire was bred by Gardiners Angus Ranch, Kansas. He has \$Index values topping Australian Group Breedplan, with a good combination of calving ease, high growth, fertility and carcase qualities. We are one of the only herds in Australia where you can purchase one of his sons.
